

Institute-Based Research Support

In the modern academic landscape, institutions are judged not only by the number of graduates they produce but by the quality of their research output, their ability to attract grants, and their visibility in global scholarly networks. At Midach, we believe that building a world-class research culture is the cornerstone of institutional excellence. Our comprehensive research support services empower universities, polytechnics, and research institutes to publish globally, win competitive grants, and achieve higher rankings.

1. Institutional Licenses for Essential Research Software

We provide institutions with genuine, multi-user licenses at special academic rates for the most widely used research tools. These include SPSS, AMOS, and SmartPLS for statistical and structural equation modeling; NVivo for qualitative and mixed-methods analysis; and EndNote, Zotero, or Mendeley for reference management with unlimited storage. To ensure academic integrity, we integrate Turnitin and iThenticate for plagiarism detection, alongside Grammarly and QuillBot institutional accounts for writing support. Specialized tools such as ATLAS.ti, MAXQDA, Stata, EViews, MATLAB, and OriginPro are also available on demand. All licenses are campus-wide, include training, and come with 3–5 years of updates, ensuring long-term sustainability.

2. Research Methodology & Academic Writing Training

We deliver hands-on, certified programs both on campus and online, covering quantitative, qualitative, and mixed-methods research design. Advanced data analysis workshops using SPSS, NVivo, R, and Python equip researchers with cutting-edge skills. We also train faculty and students in systematic literature reviews, meta-analysis, and strategies for publishing in high-impact journals (Scopus Q1/Q2). Research ethics, Institutional Review Board (IRB) setup, and COPE compliance are integral components, ensuring that institutions meet international standards.

3. Grant Writing & Research Office Setup

To help institutions secure funding, we design and equip modern Research & Innovation Offices, recruit and train research administrators, and provide customized grant-winning templates used by TETFund, NRF, and international donors. This service transforms institutions into competitive players in the global research funding arena.

4. Data Management & Institutional Repository Solutions

We deploy fully branded and hosted repositories using DSpace, EPrints, or Figshare, ensuring that institutional research outputs are preserved and accessible. We also develop research data management policies, train staff, and ensure compliance with open-access mandates such as Plan S, Horizon Europe, and TETFund requirements. ORCID integration for all researchers enables automated CV generation, while DOI assignment for datasets guarantees long-term digital preservation and global discoverability.

We are committed to helping institutions build a research culture that is globally competitive, ethically sound, and strategically impactful. Through our comprehensive services—ranging from software licensing and training to grant writing and repository management—we enable universities and research institutes to achieve excellence. With proven results, including billions of naira in secured funding and globally indexed publications, we continue to transform Nigerian institutions into world-class research hubs.
